BIONICLE® BUILDING STEPS!

NIAZESK

The Niazesk are a species of tiny insects created long ago by the Brotherhood of Makuta to keep larger Rahi beasts in check, using their toxic bite. Makuta Mutran brought some samples of the insects to Karda Nui, where the strange waters mutated the Niazesk to great size and increased the potency of their poison. Now they haunt the swamps of the core, one more danger in a land full of them.

Build the Niazesk using pieces from 8687 Toa Pohatu, 8692 Rongrah, and 8697 Toa Iguana.
